

Press release:

MAZARO delivers Innovative RVT transmission for in-vehicle testing.

Kortrijk, Belgium - 29.03.2024

A significant milestone: MAZARO has finalized the testing phase of its RVT370 transmission. This advanced transmission has now been shipped to a manufacturer of Commercial Vehicles, who will integrate the transmission into a 11-tonnes truck for an extensive A-sample testing phase. The insights gathered during these tests will directly inform the design of the B-sample transmission. The RVT370 belongs to the same product family as the RVT380, which caters to smaller tractors and off-road utility vehicles. Over the past year, MAZARO's RVT transmissions have undergone rigorous fine-tuning, ensuring optimal performance and reliability.

With this recent delivery, the RVT370 follows in the footsteps of the successful SVT product family—a true game-changer in the realm of electric mobility thanks to its unparalleled efficiency. The SVT230 has been successfully integrated in an electric Light Duty Truck and an off-highway machine. The SVT230 has been smoothly operating for nearly 2 years now to the satisfaction of the customer. This success garnered recognition in 2023 when it received the prestigious Innovation Award by CLEPA, the European Association of Automotive Suppliers.

ready for shipment

About MAZARO

MAZARO is not just another player in the automotive industry. We are the architects of transformation and we have been rewriting the rules of efficiency, sustainability, and performance.

We are a Belgian powerhouse, specializing in patented transmissions that redefine what's possible. Our team is a dynamic blend of visionaries and experts, united by a common purpose: to revolutionize mobility.

Our groundbreaking transmissions are game-changers. Imagine reducing energy consumption and emissions by double digits across commercial and off-highway vehicles. With a strongly reduced number of components and assemblies, our transmissions are cost-effective, significantly lighter, maintenance-free, and ready to propel the future. It is therefore no surprise that the European Association of Automotive Suppliers Clepa selected MAZARO's technology for their Innovation Award 2023.

We are on a mission to enhance energy efficiency, reduce emissions, and drive sustainable mobility. At MAZARO, we don't settle for incremental improvements; we aim for quantum leaps. Our technology is no longer about gears; it's about reshaping the automotive landscape.
